

BARBEQUE CHARCOAL LIGHTER G2

Description

An electric barbeque lighter, that lights the charcoal or briquettes without barbeque fluid and therefore has less influence on the environment and doesn't leave any negative effect on the taste of the food on the barbeque.

In this new enhanced model, a chimney type, the elements are placed inside a protective steel casing. We have also added an extra handle for easier pouring of the charcoal onto the grill.

Fill the chimney with charcoal, connect the cable to an electrical socket and you have perfectly glowing charcoal that should be poured onto the barbeque within 8-12 minutes, which enables planning of the barbeque process.
